conFLOW - map workflows in a simple way

Key Facts

- Make a standard SAP workflow productive in one day instead of ten days: with conFLOW, complex workflows can be mapped without SAP workflow know-how using simple ABAP-based customizing
- Any number of workflows can be defined. These workflow definitions determine the flow of a workflow
- The integration of conMOBILE V1.3 and SAP Fiori enables the mobile representation of each workflow step

Benefits

- Customizing by the department is possible
- Use of standard workflow transactions / tools
- Notification through dynamic HTML mails
- Integration in conMOBILE V1.3
- Integration SAP Fiori Inbox
- Central administration – a clear display of active workflows
- Reduction of errors and maintenance effort
- Automatic and ad-hoc reporting

Functions

- Definition of workflows by means of customizing and ABAP programming
- Determine all relevant approval steps
- Control of the workflow sequence (e.g., mail dispatch)
- User status set
- Customized extension via BAdI

Highlights

- Audit-compliant workflow protocols
- Massive reduction of the lead time of a workflow project
- S&OP processes easily mapped and implemented in different business scenarios
- Commonly used in HR business processes but also in the field of O2C processes
- Convenient handling thus minimal training efforts

Technicals

- SAP ECC or S/4 HANA
- SAP Workflow
